HEADQUARTERS
DEPARTMENT OF THE ARMY
WASHINGTON, DC, *31 December 1986*

ECONOMIC STUDIES FOR MILITARY CONSTRUCTION DESIGN—APPLICATIONS

			Paragraph	Page
CHAPTER	1.	GENERAL		
		Purpose	1-1	1-1
		Scope	1-2	1-1
		Background	1-3	1-1
		Cost data	1-4	1-1
		References	1-5	1-2
	2.	CRITERIA AND STANDARDS		
		Introduction,	2-1	2-1
		General economic studies	2-2	2-2
		Special energy-conservation studies–non-renewable resources	2-3	2-8
		Special energy-conservation studies–renewable resources	2-4	2-11
		Special studies for innovative alternative wastewater-treatment technology	2-5	2-14
		Special intra-DOD directed economic studies	2-6	2-14
	3.	PRESENT WORTH CALCULATIONS: CONVENTIONAL APPROACH		
		Introduction,	3-1	3-1
		Calculations	3-2	3-1
		Illustrative analyses	3-3	3-9
	4.	PRESENT WORTH CALCULATIONS: ONE-STEP APPROACH		
		Introduction	4-1	4-1
		Calculations	4-2	4-1
		Illustrative analyses	4-3	4-11
	5.	ECONOMIC RANKING CALCULATIONS		
		Introduction	5-1	5-1
		General economic studies..	5-2	5-1
		Special energy-conservation studies – non-renewable resources	5-3	5-2
		Special energy-conservation studies — renewable resources	5-4	5-2
		Special studies for innovative/alternative wastewater-treatment technology	5-5	5-8
		Special intra-DOD directed economic studies	5-6	5-8
	6.	SAMPLE APPLICATIONS: THE INDIVIDUAL LCCA		
		Introduction	6-1	6-1
		Roadway/parking surface	6-2	6-2
		HVAC system: conventional design	6-3	6-2
		HVAC system: energy conservation	6-4	6-3
		Domestic hot water heating system: energy conservation (solar)	6-5	6-4
		Wastewater treatment facility	6-6	6-5
APPENDIX	A.	LIFE CYCLE COST ANALYSIS EXAMPLES		A-1
	B.	TABLES OF FACTORS FOR PRESENT WORTH CALCULATIONS BY CONVENTIONAL APPROACH		B-1
	C.	DEPARTMENT OF ENERGY (DOE) REGIONS		C-1

LIST OF FIGURES

Figure 3-1. One-time cost calculations.
3-2. Series of uniformly escalating annual costs.
3-3. Annually recurring cost calculations.
3-4. Basic input data summary: exterior closure; split face block.
3-5. Present worth: conventional approach: exterior closure; split face block.
3-6. Basic input data summary: HVAC system, conventional.
3-7. Present worth: conventional approach: HVAC system, conventional.
3-8. Basic input data summary: domestic hot water heating system; system increment.
3-9. Present worth: conventional approach; domestic hot water heating system; solar system increment.
4-1. Adjustment factors for one-time costs (one-step table l).
4-2. One-time cost calculations.
4-3. Adjustment factors for annually recurring M&R costs (one-step table 2).
4-4. Adjustment factors for annually recurring electricity costs (one-step table 3.4EL).
4-5. Adjustment factors for annually recurring distillate oil costs (one-step table 3.4DO).

LIST OF FIGURES–Continued

Figure 4-6. Annually recurring cost calculations.
4-7. Present worth: one-step approach: exterior closure, split face block.
4-8. Present worth: one-step approach: HVAC system, conventional.
4-9. Present worth: one-step approach: domestic hot water heating system, solar system increment.
5-1. Example: SIR calculation,
5-2. Example: DPP calculation.
C-1. Regional reference map.

LIST OF TABLES

Table 2-1. LCCA criteria overview: general economic studies for MCP designs.
2-2. LCCA criteria overview: special energy-conservation studies.
5-1. General economic studies ranking examples.
B-1. Annual cash-flow-series equivalence factors–annual discount rate = 7.009%.
B-2. Annual cash-flow-series equivalence factors—annual discount rate = 10.00%.
B-3. Escalation factors,
B-4. Discount factors.
